

What is GRP?

Glass Reinforced Plastic (GRP) belongs to a group of materials known as "Polymer Composites". A polymer composite material consists of Matrix, in this case petroleum based resin, along with the Reinforcement, glass fibre. The key function of matrix (resin) is to bind and hold the fibres (reinforcements) in position, very well. Glass fibre has some excellent mechanical properties including high rigidity and strength which makes it ideal for its role in the reinforcement of the resin. The result of combining these two elements, resin and glass fibre, is a lighter structure (in comparison to structures composed metals or wood), is corrosion resistant and has a greater strength to weight ratio.

Applications

GRP is widely used across many industries including automotive, marine, construction and sport and leisure. Here are some examples:

- Small to medium size boats hulls
- Car body (Lotus)
- Car/Trucks bumpers
- Small aircraft fuselage
- Bathtubs
- Roofs

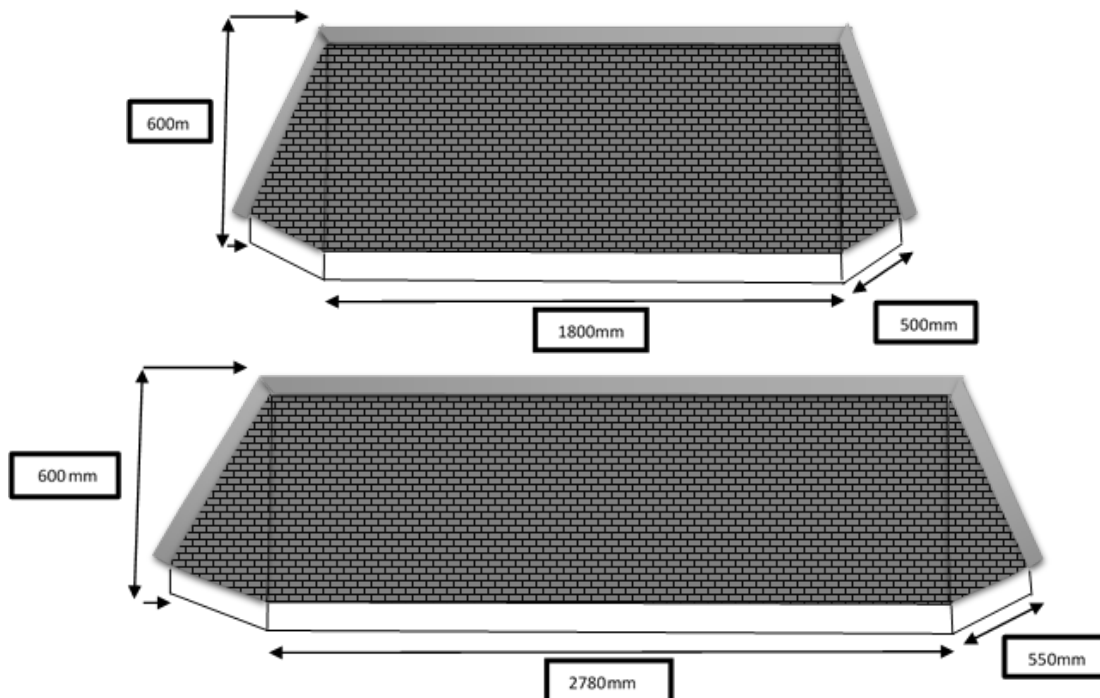

Why GRP?

- Low Cost
 - Durability; being corrosion resistant and weatherproof
 - Maintenance Free; no paint is required
 - Ease of Installation; can be fitted in a few hours
- Wider Choice; various styles , colours and designs

All of our door canopies and columns are produced by hand ensuring the highest quality.

AMAZON DOOR CANOPY

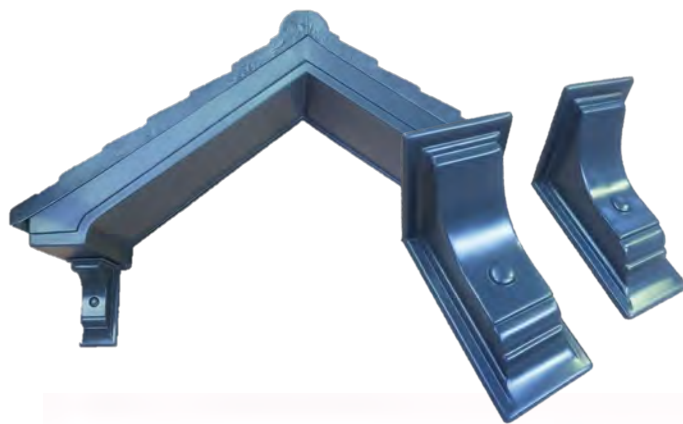

Available in two widths

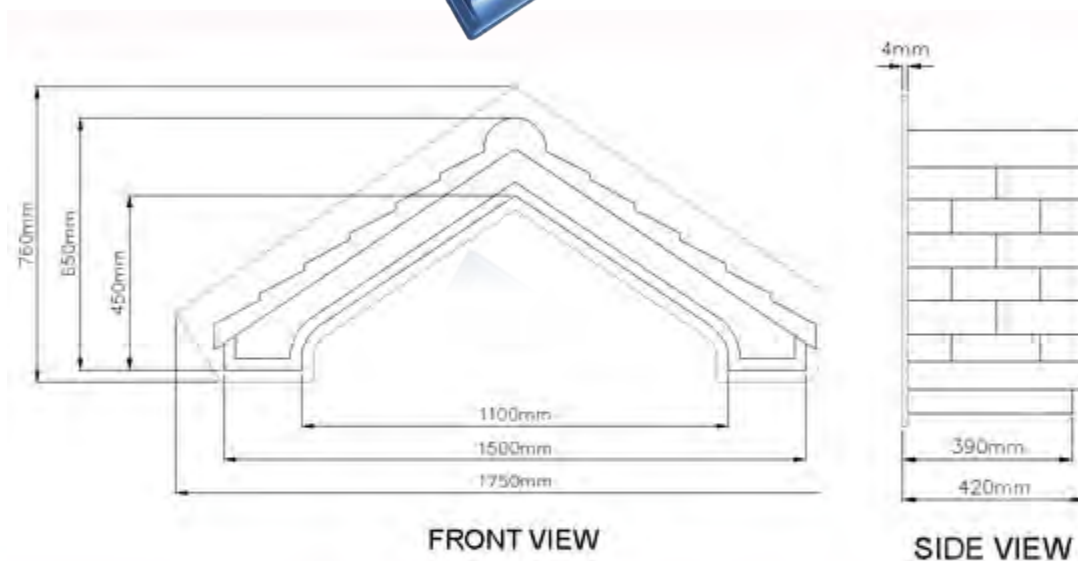

APOLLO DOOR CANOPY

Anthracite Grey
Colour

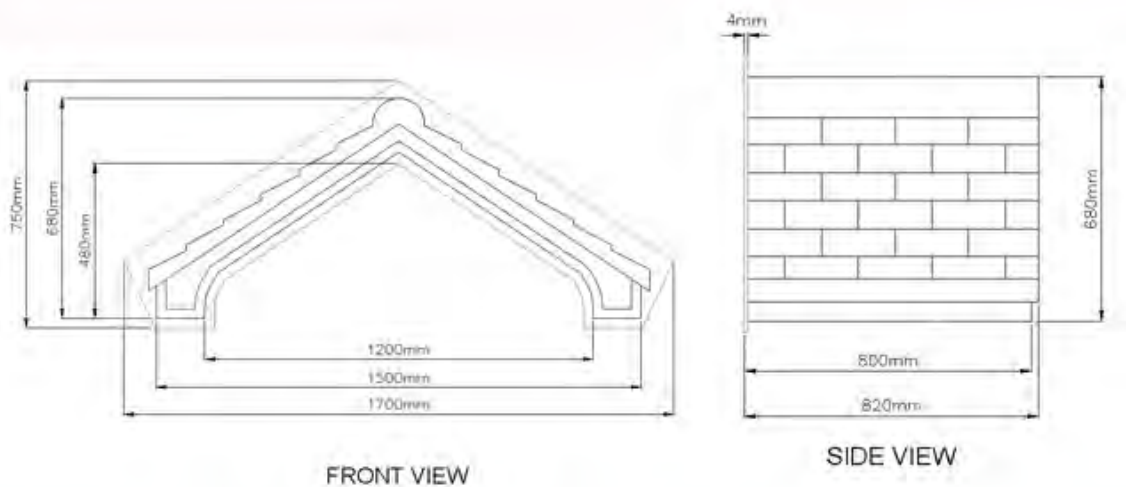

Mahogany Colour

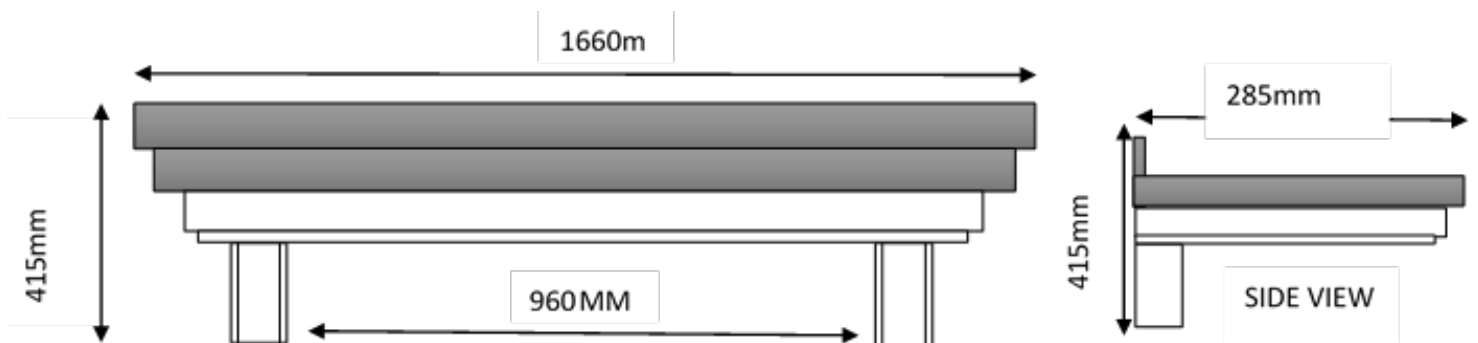

ATLAS DOOR CANOPY

Terracotta
Colour Roof

AURA DOOR CANOPY

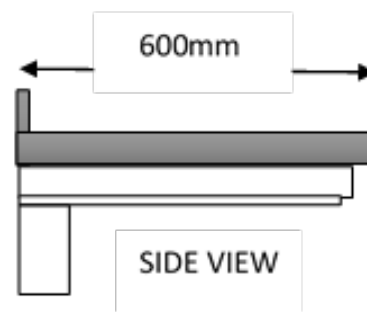

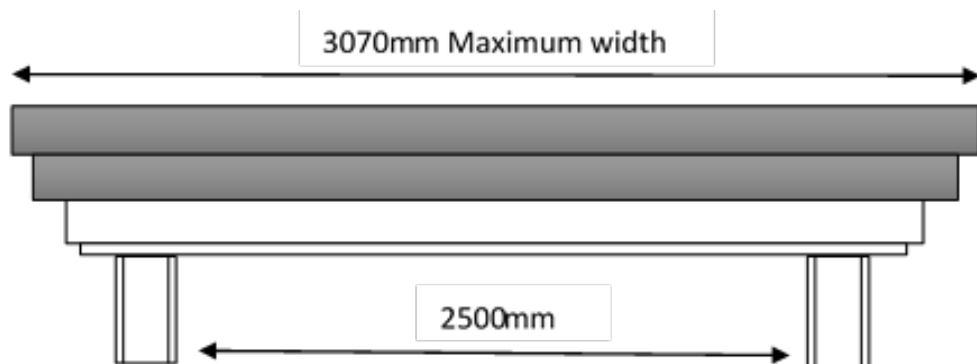

DELTA DOOR CANOPY

The Delta door canopy can be made to your requirements in any width up to 3000mm

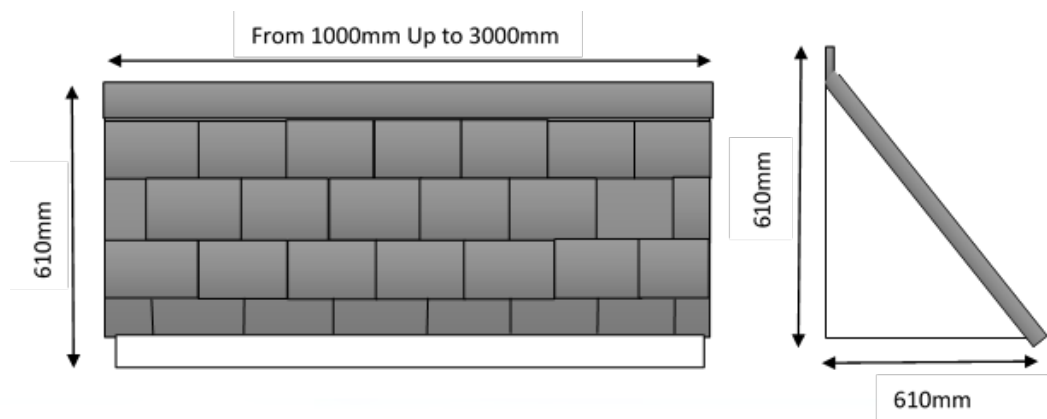

Mahogany Colour

PALERMO DOOR CANOPY

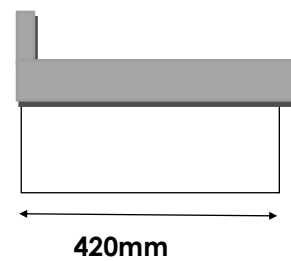

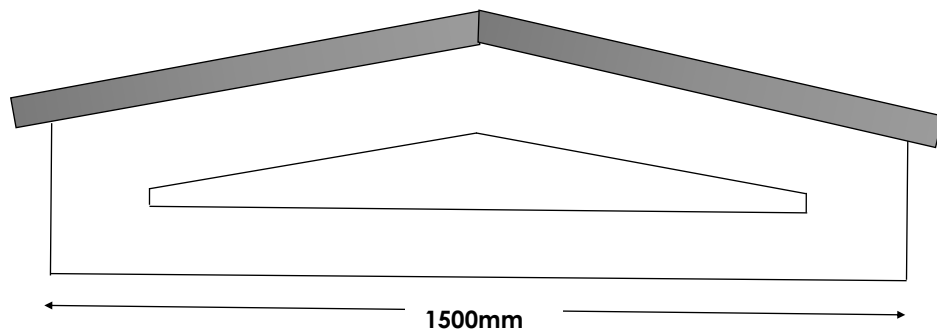

Made to measure to meet your requirements, any width up to 3000mm.

ALTA DOOR CANOPY

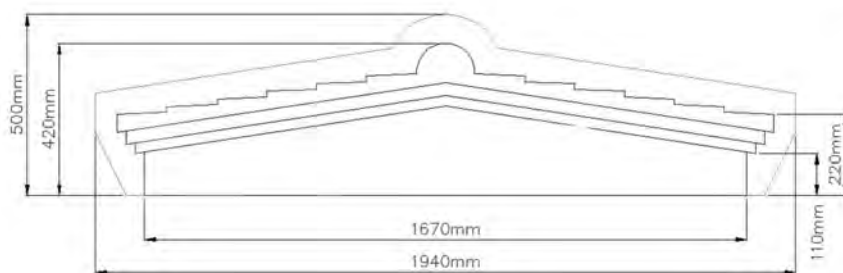

1600mm

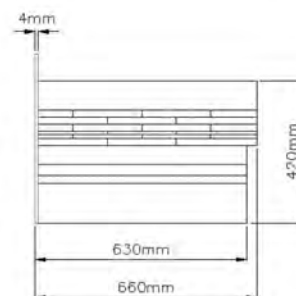

PACIFIC DOOR CANOPY

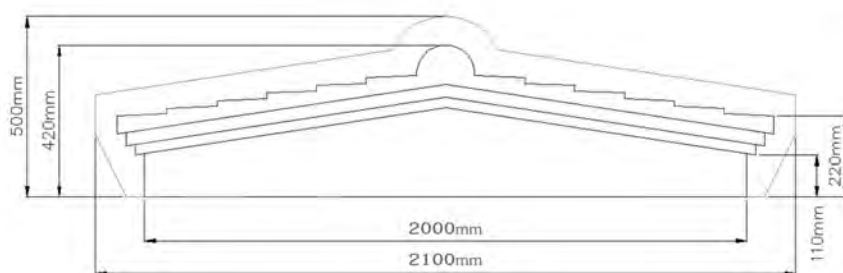

Available in two widths
